 Ulmenliet 20, 21033 Hamburg, Germany
 E-mail: bioplastics@ls.haw-hamburg.de, www.bioplasticseurope.eu

The main objective:

To develop sustainable strategies and solutions for bio-based plastic products, as well as the to develop approaches focused on circular innovation for the whole bioplastics system. These may be deployed to support policy-making, innovation and technology transfer.

Objective 6:
Communication Strategy
+ cooperative knowledge
sharing of Best Practices and
Lessons Learned
WP9

BIO
PLASTICS
EUROPE

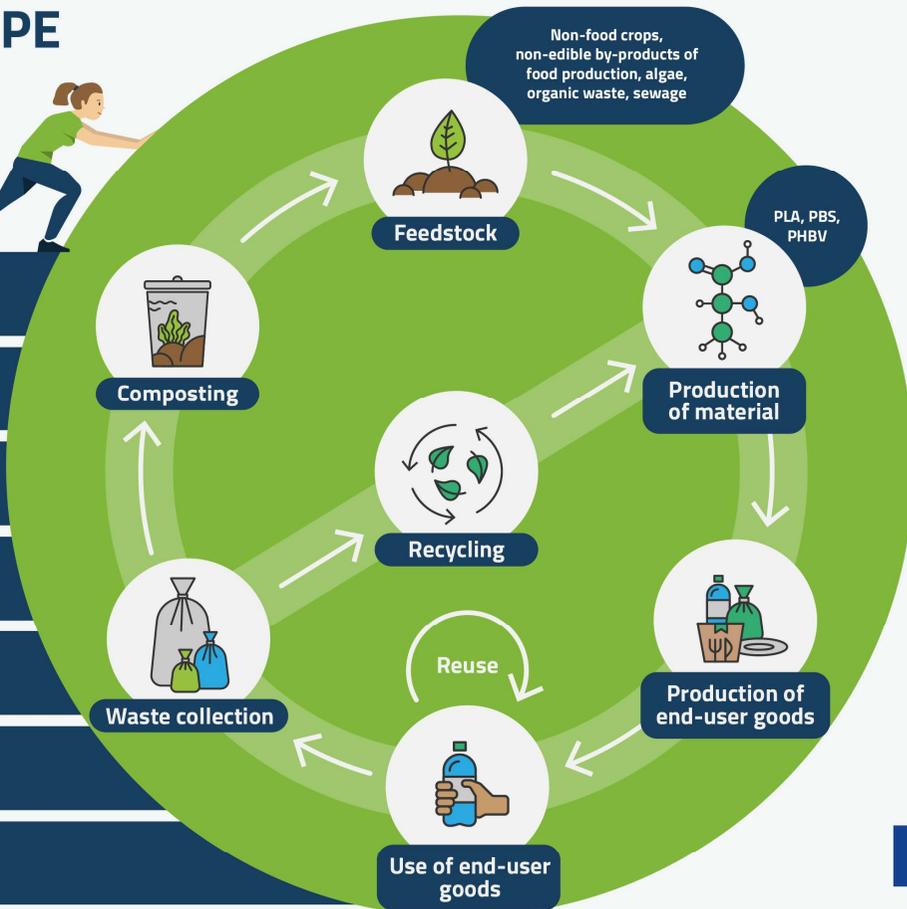

BIO-PLASTICS EUROPE

Pushes towards circular economy

- WP3** Identification and test of innovative product design
- WP4** Plastic waste collection, recycling and littering
- WP5** Prenormative research and field tests
- WP6** Health and environmental safety
- WP7** Replication, policy-making, capacity-building and upscaling
- WP8** Life cycle assessment environmental and economic
- WP9** Information, communication, and dissemination of results

EXPECTED RESULTS

FOCUS

Cutlery, Soft and Rigid Packaging,

Agricultural Mulch Film, Toys and Aquatic Materials

● INNOVATIVE MATERIALS

to foster and encourage deployment of innovative bio-based and biodegradable materials

● STAKEHOLDERS ENGAGEMENT

to ensure strong commitment of producers, politicians, industrial and private consumers

● BUSINESS MODELS

to experiment with innovative business models by incorporating circularity and sustainability to maximize the value of materials along the entire value chain

● SAFETY PROTOCOLS

to ensure the safe use and end-of-life management on innovative bio-based plastics

Where we stand now....

Within the BIO-PLASTICS EUROPE project, the following end-products are experimented:

- **PACKAGING (rigid and flexible)**
- **TOYS**
- **AGRICULTURAL MULCH FILM**
- **CUTLERY**
- **AQUATIC MATERIALS: geo-membrane, fishing baits, fishing cradles**

First group of 5 materials developed

5 MATERIALS:

The materials under investigation are:

1. BPE-FP-PBS
2. BPE-RP-PLA
3. BPE-T-PHBV
4. BPE-AMF-PLA
5. BPE-C-PLA

From this list mainly PLA is already commercially in use and well available according to very recent application notes from various companies.

SENT FOR LABORATORY AND FIELD TESTS

- Samples prepared-received
- Test Protocols finished
- Tests started 1st of September
- First preliminary results obtained

**MODIFICATION of the materials after 1st round tests****2nd round of TESTS**

Besides focusing on research....

Aeroobsed kompostimiskatsed

- Katsed põhinevad standardil ISO 14855-1
- *“Determination of the ultimate aerobic biodegradability of plastic materials under controlled composting conditions — Method by analysis of evolved carbon dioxide”*

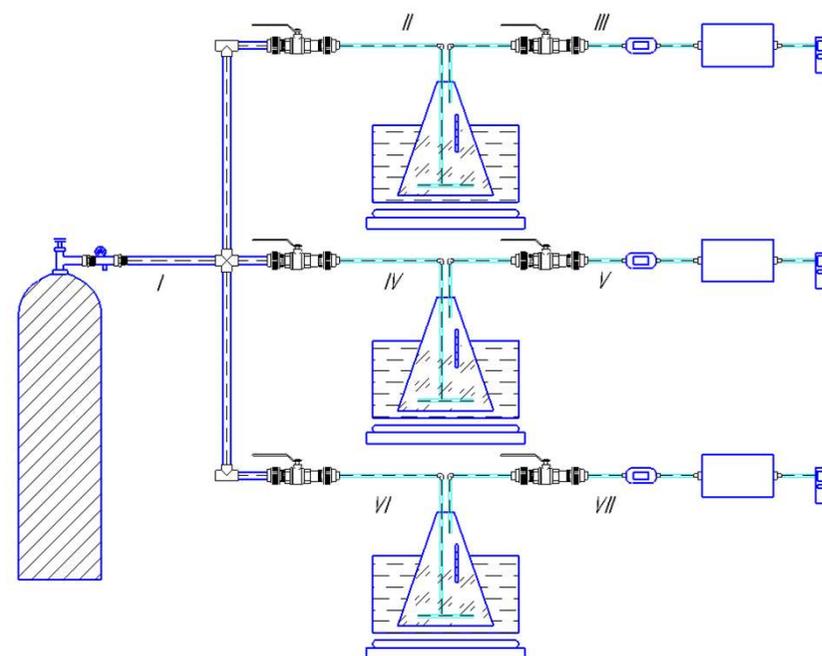

Aeroobsed kompostimiskatsed

Katse tingimused:

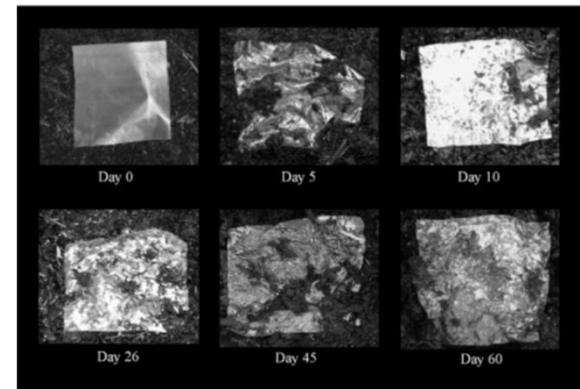

- Temperatuur 58 ± 2 °C
- O₂ sisaldus vähemalt 6%
- Uuritaval materjalil 3 paralleeli
- Katsekeha suurus 2x2cm max
- Katse periood kuni 6 kuud

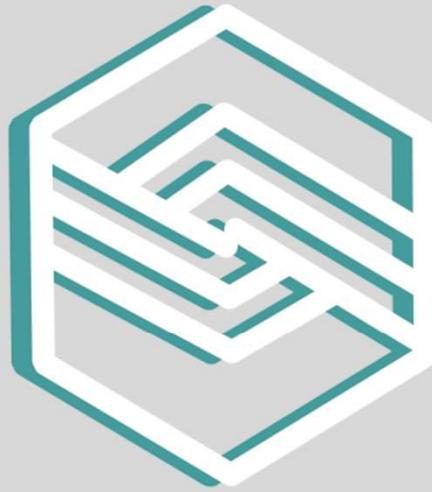

Jälgitavad parameetrid:

- KA, LA, TOC, pH
- O₂, CO₂,
- katsekehade kaal ja kuju

New Era of Biodegradable Composites

- *Bioerodible reinforcing glass fiber made from "bioactive glass"*
- In-house functionalized compounds from commercially available biodegradable *bioplastics*
- Can be processed as current glass fiber reinforced polymers

Why biodegradable bioplastics from renewable resources?

- ***Decoupling from oil resources***
 - Depletion of oil resources, potential price increase
 - Improved biotechnological process for biomass conversion -> more efficient monomer production -> price reduction
- ***Environmental impacts***
 - Carbon neutral & reduced global warming potential (GWP)
 - Biodegradation a solution to waste from un-intentional littering (soil/marine)
- ***Positive image***
 - Today sustainability is of high priority in company policies
 - A willingness for accepting increased costs (to a certain level)
- ***Legislation/govermental actions/strategic***
 - Proposals & Directives for reduced use of fossil based plastics
 - Actions promoting use of bio-based resources for biofuel and bioplastics

Bioplastics - Challenges

Availability

- limited availability (competition with biofuels and use in food and cosmetics)
- uncertainty in increased production volumes -> obstacle for big players to jump on the bioplastic train

Feedstock

- ethical issues (food; 1st generation vs non-food; 2nd & 3rd generation))
- GMO free

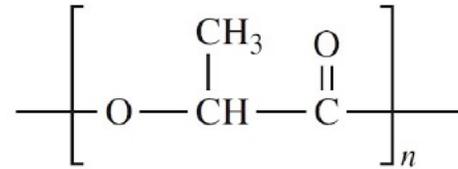

High price

Development of appropriate infrastructure for recycling->Sustainability &circular economy

Define the most optimal use and application of eg. PLA (functionality match and where the value proposition overcomes price issues)

Need to go for more demanding (semi)durable applications instead of disposables => Need for better material performance => alternatives to fossil-based technical plastics

Poly lactide-PLA

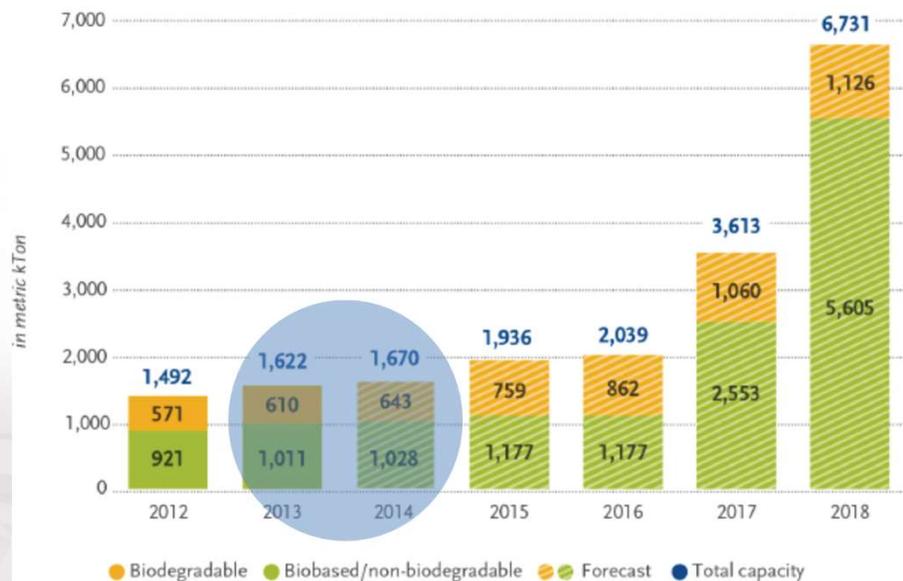

- Not a new kid on the block!
- Lactide monomer was described already 1912
- Polylactide was produced 1932 by W.H. Carothers
- NatureWorks LCC started commercial production 2001/2002
 - Today announced 140.000 T/year capacity
- Since then several companies have enter but also left the market
- Total Corbion launched a 75.000 T/year plant 2019
- Total PLA production ~240.000 T/year (ABS ~11 miljon tonnes)

Bioplastic production capacities Past – present -future

Specific PLA-grades available for different processing methods and end applications

Poly-L-Lactide (PLLA) properties

PROS

- From renewable sources
- Reduction in carbon footprint
- Barrier properties (grease, aroma)
- Stiffness, strength
- Compostable/Biodegradable

CONS

- Low elongation
 - **Low impact resistance** ☹️
 - **Low heat resistance** ☹️
 - **Slow crystallization**
 - Injection molding =>
- } brittle

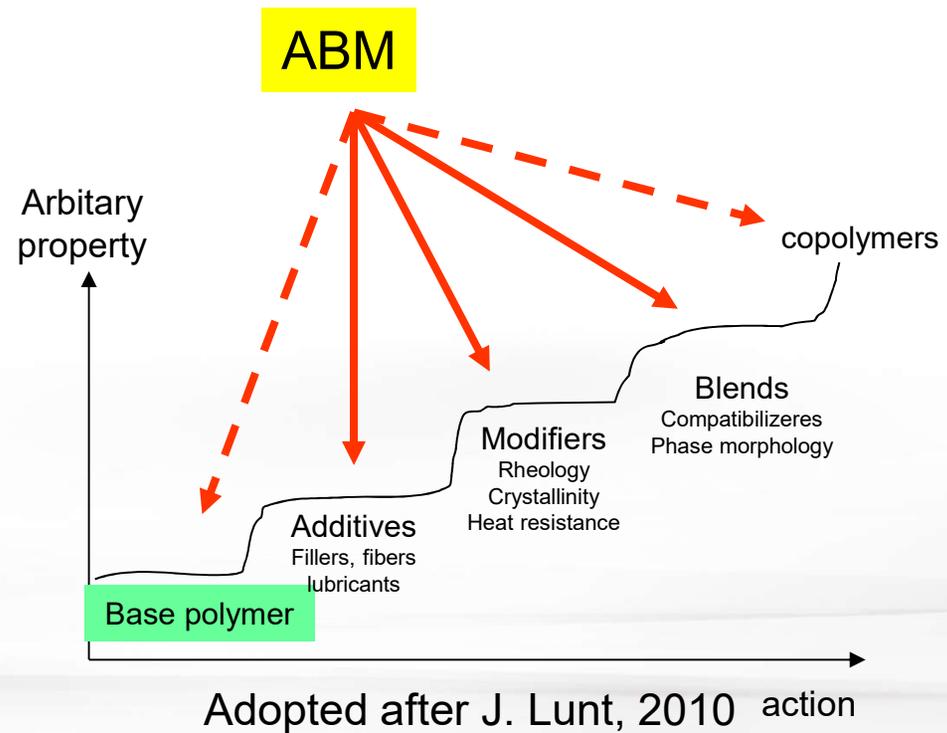

General properties

	Neat PLLA	ABS	PC
Tensile strength MPa	~50	~40	60
Tensile Modulus MPA	3500	2200	2350
Elongation at break %	2-5 ☹️	25	120
IZOD unnotched Notched KJ/m2	15-20 (2) ☹️	10-15 (10)	NB (65)
HDT B, 0.45 MPa	55 ☹️	90 (anneal)	127(A)

Requires high mould temperatures and long cycle times ☹️

Improvement of PLLA properties

- Hydrolytic Stability
- Distortion Temp/heat resistance
- Morphology
- Impact Resistance
- Melt Strength/processability

Non-reinforced PLA Products

Comparison between ABM PLA-formulations and typical fossil-based technical plastics

	Neat PLA	ArcBiox* HEAT	ArcBiox * IMPACT	ArcBiox ** Injection	PP	ABS	ABS-PC
Impact Izod Notched (KJ/m2)	2 (8)	12 😊 (60)	~20 (80) 😊	20 😊 (100)	~10	22	40
Tensile strength MPa	~50	60	~50	33	32	47	55

Plastpakendite jätkusuutlikkuse väljakutsed

Jätkusuutlike pakendilahenduste olukord turul

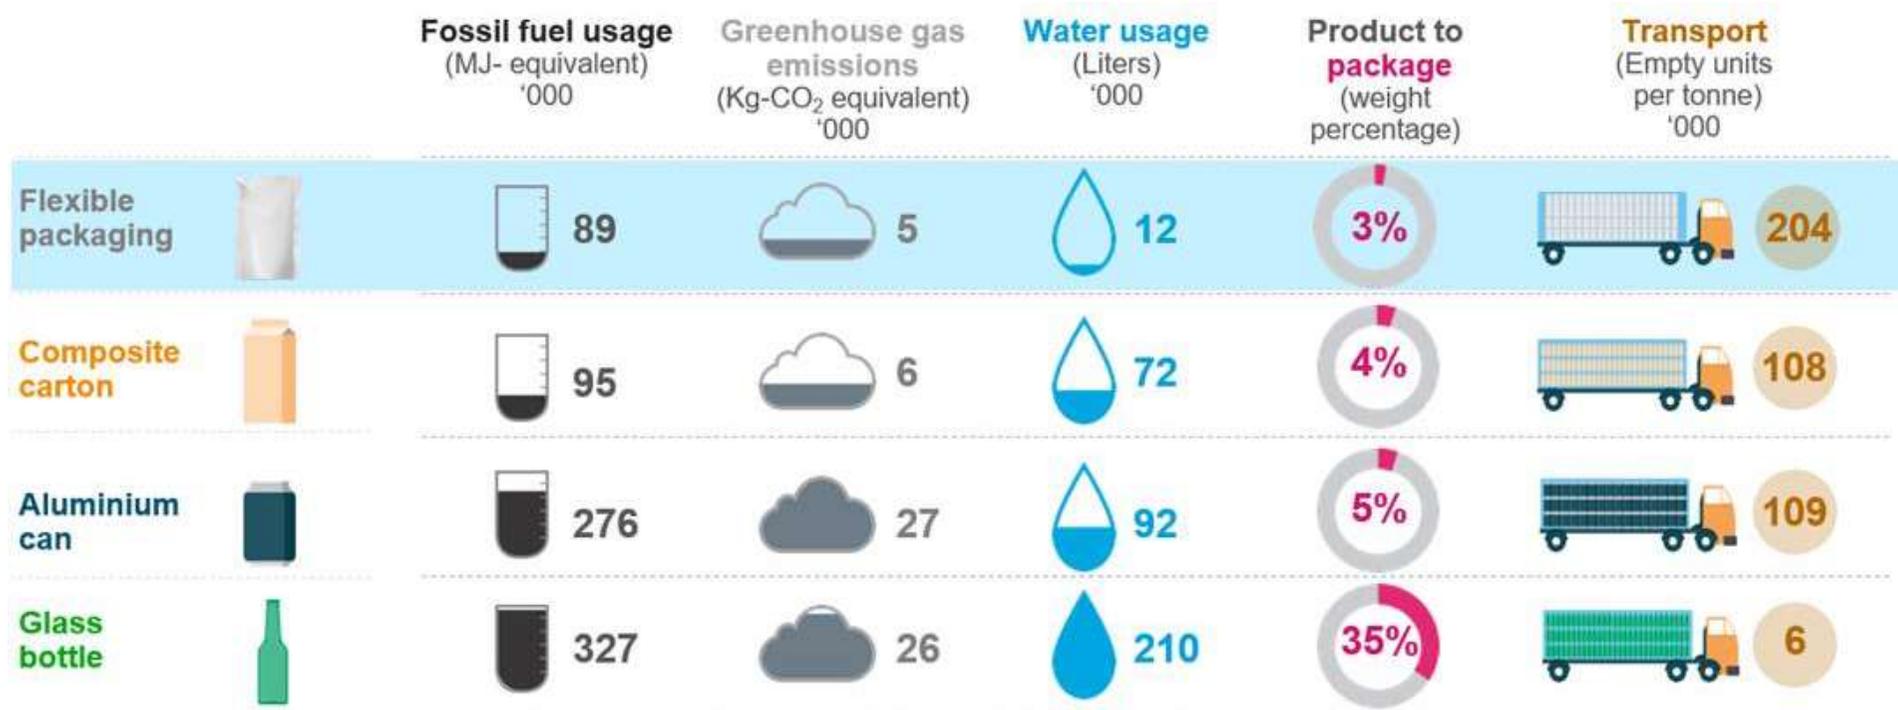

Lagunevad:

- Oksolagunevad = mikroplast
- Biolagunev – umbmäärane väljend
- Komposteeritav
 - Tööstuslik komposteerimine
 - Kodus komposteeritav

Paberlahendused:

- Hermeetiliseks pakendi sulgemiseks polümeer siiski vajalik
- Paberlaminaat – kõrge polümeeri osakaal
- Pinnakattena – madal polümeeri osakaal

Plastpakendil on üldjoontes madalam keskkonnajalajälg

Allikas: Flexible Packaging Association

Pakkematerjalide võrdlus

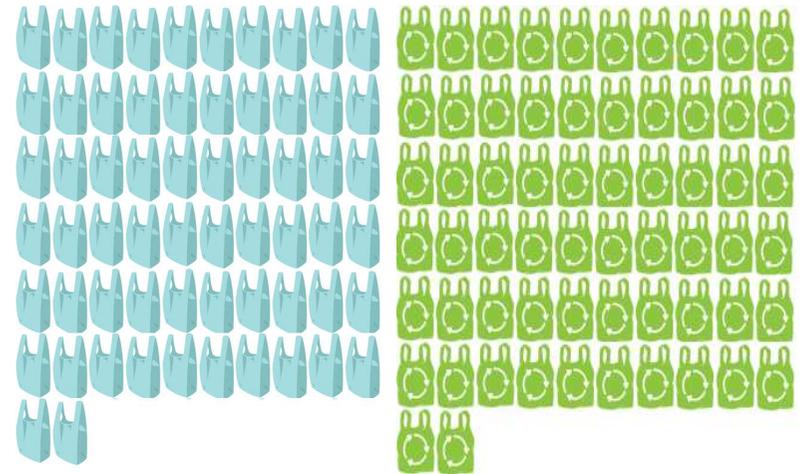

Allikad:

- Polüetüleen ja paber: Taani keskkonnakaitseagentuur (<https://eng.mst.dk/>)
- Green PE (suhkruroo baasil PE): <http://plasticoverde.braskem.com.br/site.aspx/Im-greenTM-Polyethylene>

			
	3,73 kg	290 m ³ / t	2,2 MJ/t
	2,08 kg	2 m ³ / t	1,3 MJ/t
	-3,09 kg	4,9 m ³ / t	2,27 MJ/t

Poekoti näitel

1 kg toormaterjali kohta:

				
	55 g	204 g	15,05 L	120 kJ
	16 g	33 g	0,032 L	21 kJ
	16 g	-50 g	0,078 L	36 kJ

*“By 2030, all plastics packaging placed on the EU market is either reusable or **can be recycled in a cost-effective manner.**”*

Euroopa Komisjon, 2018

Senised lahendused

Jätkusuutlik tooraine:

- **Bio-baasil:** tselluloos, suhkruroog jne
- **Ümbertöödeldud** plastmaterjal (peamiselt tööstuslik jääde)

Jätkusuutlik elutsükli lõpp:

- **Mehaaniline ümbertöötlus** – kaotame kvaliteedis, pole võimalik kasutada toiduainepakendites = madal nõudlus ja ümbertöödeldud materjali väärtus

Ümbertöötamise uus tase

Keemiline ümbertöötus – tagasi algosakesteks

Kvaliteet ei
muutu

Ei eelda
polümeeride
sorteerimist

Sobib nii
tööstuslik kui
tarbijajärgne
jääde

Sama
süsteemi
võimalik
kasutada bio-
baasil
toormega

Tooraine

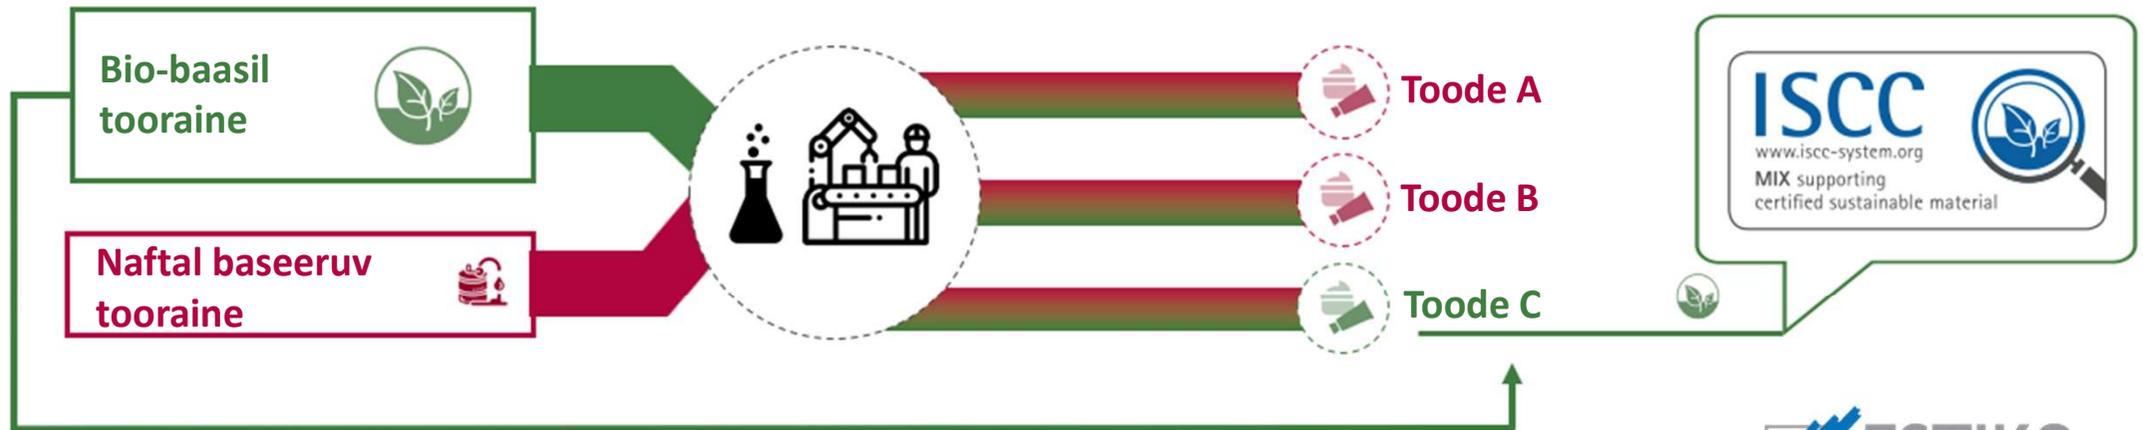

- **Bio-baasil** – jääkrasvad ja –õlid (ei konkureeri toiduainetööstusega)
- **Ümbertöödeldud** – pürolüüsiõli, toodetud plastijäätmetest

Bio-baasil tooraine

Ümbertöödeldud tooraine

Jätkusuutlik osa on võimalik määrata ühele või mitmele tootele!

Meie valik jätkusuutlikke tooteid

	Barjäär	Külmutatav	Steriliseeritav	Ümber- töödeldav	PIR/PCR	ISCC Bio/ Circular	Green PE	Pakendi tüübid
Mono-kiled (OPP/PET/PE)	L; H	Y; N			PCR (PET)	Peatselt		ÜLARADA; VFFS; HFFS
